

Forklift Feeding Cache Silo NPK Fertilizer Batching Equipment

Our Product Introduction

for more products please visit us on organicfertilizerequipment.com

Basic Information

- Place of Origin: China
- Brand Name: TONGDA
- Certification: CE, ISO
- Model Number: TDHL-1220
- Minimum Order Quantity: 1
- Packaging Details: According to customer requirements
- Delivery Time: 5-10 days
- Payment Terms: L/C, D/A, D/P, T/T, Western Union, MoneyGram

Product Specification

- Product Name: Cache Silo
- Capacity: 2-5 Ton/h
- Dimensions(mm): 2300*1400*2400
- Application: Fertilizer Production Line
- Key Selling Points: Can Be Customized According To Customer Requirements
- Material: Carbon Steel Or Stainless Steel
- Highlight: **Forklift Feeding Cache Silo, NPK Fertilizer Batching Equipment, NPK Fertilizer Cache Silo**

Product Description

Customizable Anti-Corrosion Cache Silo Forklift Feeding Fertilizer Manufacture Machine

Cache Silo belongs to the batching equipment in the organic fertilizer production line. The batching equipment consists of a feeding system, a weighing device, a batching bin and a conveyor belt. At the fertilizer batching site, there is a high requirement for the continuity of batching, and it is generally not allowed to stop the intermediate batching, so a buffer bin is required. The batching bin is not only a buffer bin, but also a device for storing organic fertilizer materials.

Product introduction:

The buffer silo is a buffer device in the drum screening machine and the packaging machine. There is only a small hopper on the upper part of the packaging machine, and the packaging machine operator requires that it cannot be stopped.

Model	Capacity(t/h)	Dimensions(mm)
TDHL-1220	2-5	2300*1400*2400

In the process of powder material packaging, due to the same direction of water content and density of material family, poplar material family is easy to block under the birch family. The packing scale can not work normally. Buffer silo is mainly a storage device for bulk materials. The buffer feeding bin is designed with an inclined discharge outlet, which is the same as the angle of the conveyor, to solve the problem of dead angle in the discharge of the bin. In addition, a vibration motor is installed on the conveyor, a frequency conversion speed regulating motor is installed on the conveyor, and an upper and lower limit stop are installed on the feeding end to prevent the material from being too full and to ensure that the lower end of the material is always in a state of material.

FAQ:

1. Are you trading company or manufacturer ?

We are a manufacturer with a history over 40 years and have realized one-stop service for design, manufacture, installation, debugging and technical training.

2. How long is the delivery time?

For standard machines or Components, it would be 5-10 days; For non-standard machines and customized machines according to clients specific requirements, it would be appointment time.

3. Do you arrange shipment for the machines?

Yes, we will do that. For FOB or CIF price, we will arrange shipment for you. For EXW price, we will assist you in arranging shipment.

4. How about your product after-sales service?

Normally we provide video and written technical support. If necessary, our engineers can also provide on-site service. Our product accessories can be selected according to the actual needs of the customer to choose the most appropriate way to deliver.

5. What kinds of certificate you have?

ISO 9001: 2015 SGS and we can make other certificates according to customers' detailed requirements.

6. How to guarantee the quality and operation before loading?

We have our own quality control department and have advance quality control system while from raw materials to finished products. All the machines and production lines shall be 100% checked and tested before delivery.
