

Manure Crawler Walking Compost Windrow Turner Equipment 97% Production Capacity

Our Product Introduction

for more products please visit us on organicfertilizerequipment.com

Basic Information

- Place of Origin: China
- Brand Name: TONGDA
- Certification: ISO, CE
- Model Number: TDLDF-2600
- Minimum Order Quantity: 1
- Packaging Details: According to customer requirements
- Delivery Time: 10-15 days
- Payment Terms: L/C, D/A, D/P, T/T, Western Union, MoneyGram
- Supply Ability: 100 units per month

Product Specification

- Features: Cylinder Hydraulic Lifting
- Product Name: Compost Windrow Turner
- Production Capacity: 97%
- Application: Fermentation Of Organic Waste
- Row Spacing: 800-1000mm
- Maximum Diameter Of Material Particles: 250mm
- Highlight: manure crawler walking compost windrow turner , 97% production capacity small compost turner , 97% production capacity compost windrow turner

Product Description

Manure Compost Turner Machine Crawler Walking Turner Equipment

Brief introduction of crawler walking turner equipment:

The crawler walking turner equipment belongs to the ground pile fermentation mode, which is the most economical mode of saving soil and human resources at present. The material needs to be piled up into a stack, then the material is stirred and crushed at regular intervals by the turning machine, and the decomposition of organic matter will be under aerobic conditions. It also has a broken function, which greatly saves time and labor force, making the production efficiency and product quality of the organic fertilizer plant improved significantly, and the cost reduced greatly. When the turning machine works, the sludge, sticky chicken manure and other materials can be well stirred with the fungus and straw powder, creating a better aerobic environment for the fermentation of materials. It not only ferments faster than deep groove type, but also effectively prevents the production of harmful and odorous gases such as hydrogen sulfide, amine gas and indole during fermentation, which is in line with environmental protection requirements.

Model	TDLDF-2400	TDLDF--2600	TDLDF--2800	TDLDF--3000
Turning Width(mm)	2400	2600	2800	3000
Turning Depth(mm)	600-1000	1000-1300	1100-1400	1300-1500
Windrow Spacing (mm)	800-1000	800-1000	800-1000	800-1000
Maximum Diameter of Material Particles (mm)	250	250	250	250
Horsepower(hp)	85	116	123	156
Working Knife Diameter(mm)	400	500	500	500
Working Speed (m/min)	6-10	6-10	6-10	6-10
Capacity(m3/h)	500-700	1000-1200	1100-1300	1300-1500

Main features of crawler walking turner equipment:

1. The operation is easier and the hydraulic directional type was eliminated; save the site, artificial, diesel, shorten the working time, advance the fermentation cycle;
2. This product has been turned over and separated by soft start.
3. Installed front hydraulic push plat, so it is no need to manually take the whole pile.
4. Cylinder hydraulic lifting.

Other organic fertilizer compost turner machines:

1. **Groove type compost turner** is usually called rail type compost turner, etc. It can be used for the fermentation of livestock manure, sludge and garbage, filter mud from sugar mill, worse slag cake and straw sawdust and other organic waste. The machine is widely used in organic fertilizer plant, compound fertilizer plant, sludge and garbage plant, horticultural farm and bisporus plant for fermentation and the removal of water.
2. **Forklift type compost turner** is the patent product of our company. It is suitable for the fermentation with small scale of livestock manure, sludge and garbage, filter mud from sugar mill, worse slag cake and straw sawdust and other organic waste. The machine is also widely used in organic fertilizer plant, compound fertilizer plant, sludge and garbage plant, horticultural farm and bisporus plant for fermentation and the removal of water.
3. **Self-moving type compost turner (moving type compost turner)** is the main engine in the production of bio organic fertilizer special equipment. The machine takes four-wheel walking design, and it can move forward, backward and turn around, and is controlled by one person. The machine is mounted on a prebuilt long strip of fertilizer base, and the rotary knife shaft mounted under the frame of the machine is used to turn, loosen, move, finally the car pass and become a new rickety pile. The machine can not only be opened in the open space, but also be carried out in the workshop.

FAQ:

1. Are you trading company or manufacturer ?

We are a manufacturer with a history over 40 years and have realized one-stop service for design, manufacture, installation, debugging and technical training.

2. How long is the delivery time?

For standard machines or Components, it would be 5-10 days; For non-standard machines and customized machines according to clients specific requirements, it would be appointment time.

3. Do you arrange shipment for the machines?

Yes, we will do that. For FOB or CIF price, we will arrange shipment for you. For EXW price, we will assist you in arranging shipment.

4. How about your product after-sales service?

Normally we provide video and written technical support. If necessary, our engineers can also provide on-site service. Our

product accessories can be selected according to the actual needs of the customer to choose the most appropriate way to deliver.

5. What kinds of certificate you have?

ISO 9001: 2015 SGS and we can make other certificates according to customers' detailed requirements.

6. How to guarantee the quality and operation before loading?

We have our own quality control department and have advance quality control system while from raw materials to finished products. All the machines and production lines shall be 100% checked and tested before delivery.
